

Chromalite® 5AD2 (Analytical HPLC Column)

Macroporous Polydivinylbenzene
Adsorbent

Chromalite 5AD2 is a non-functionalized, highly crosslinked, highly porous polymer. Available in small, uniform particle sizes, Chromalite 5AD2 is ideal for reverse-phase high pressure liquid chromatography (RP-HPLC). The spherical beads show exceptional batch-to-batch consistency, enabling simple scale-up from laboratory analyses through to full-scale plant operation.

Packed into columns, sizes include:

4.6 mm x 150 mm
4.6 mm x 250 mm

PRINCIPAL APPLICATIONS

- Analytical Reverse Phase chromatography (RP-HPLC)

TYPICAL PACKAGING

- Prepacked Column

ADVANTAGES

- Highly hydrophobic
- High chemical stability
- More robust than silica materials
- Efficient regeneration
- Narrow particle size

TYPICAL PHYSICAL & CHEMICAL CHARACTERISTICS:

Polymer Structure	Macroporous Polydivinylbenzene Adsorbent
Functional Group	None
Inner diameter	4.6 mm
Packed bed height	250 mm
Column material	Stainless steel
Surface Area (min.)	500 m ² /g
Porosity, Median Pore Diameter	200 - 300 Å
Particle size (90% in Range)	3 - 7 µm
Uniformity Coefficient (max.)	< 1.15
Total moisture	0 - 5 %
pH limit stability	1 - 14
Optimal storage condition	2 - 20 °C
Expiry date (from date of manufacture)	5 years
